

# Is Your AI Ready to Survive an Audit?

## The 5-Minute AI-Readiness Check + Worksheet

Your team is already using AI. The question is whether you could prove what it did if a client, a regulator, or opposing counsel asked. Answer each question below — score 1 point for every “No / Not sure.”

### PART 1 The Check

|                                                                                                                           |                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| <b>1. The perimeter.</b> Can you name exactly where your data goes when your team uses an AI tool?                        | <input type="checkbox"/> Yes<br><input type="checkbox"/> No/Not sure                   |
| <b>2. Shadow AI.</b> Could a staff member paste a confidential document into a free AI tool today without anyone knowing? | <input type="checkbox"/> No, covered<br><input type="checkbox"/> Yes/Not sure          |
| <b>3. Vendor agreement.</b> For any AI tool touching sensitive data, has the vendor signed a BAA / DPA?                   | <input type="checkbox"/> Yes<br><input type="checkbox"/> No/Not sure                   |
| <b>4. Audit trail.</b> Could you produce a log of every question your AI was asked about a matter and what it produced?   | <input type="checkbox"/> Yes<br><input type="checkbox"/> No/Not sure                   |
| <b>5. Grounding.</b> Does your AI answer from your real documents — or sometimes make things up?                          | <input type="checkbox"/> Grounded<br><input type="checkbox"/> Makes things up/Not sure |
| <b>6. Human in the loop.</b> Is there a human reviewing AI output before it reaches a client or drives a decision?        | <input type="checkbox"/> Always<br><input type="checkbox"/> Not consistently           |
| <b>7. The policy.</b> Do you have a written AI-use policy your team knows and follows?                                    | <input type="checkbox"/> Yes<br><input type="checkbox"/> No/Not sure                   |
| <b>8. The rulebook.</b> Do you know which rules govern your AI use (Rule 1.6, HIPAA, GDPR, FINRA)?                        | <input type="checkbox"/> Yes<br><input type="checkbox"/> No/Not sure                   |
| <b>9. Access control.</b> Is access to AI systems and the data they reach limited by role?                                | <input type="checkbox"/> Yes<br><input type="checkbox"/> No/Not sure                   |
| <b>10. Ownership of output.</b> Do you know who owns, and who can see, what your AI produces?                             | <input type="checkbox"/> Yes<br><input type="checkbox"/> No/Not sure                   |

### YOUR SCORE Tally every “No / Not sure”

|                                  |                                                                                                                           |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>0-2 On Track (but verify)</b> | Ahead of most. The risk is the exposure you can't see — a short review confirms it and catches blind spots.               |
| <b>3-6 At Risk</b>               | Real, specific exposure. One pasted document or client questionnaire from a problem. The most common, most fixable range. |
| <b>7-10 Exposed</b>              | Likely already out of compliance somewhere, and you couldn't prove otherwise. Put a defensible version in place fast.     |

Whatever your score, the next step is the same: knowing you have gaps and knowing which 2-3 to fix first are very different. That's the **AI-Readiness Review**.

# PART 2 The Worksheet

Fill this in and you’ve done the first hour of the work — it’s exactly what we build out together in a Readiness Review.

## A. Tool inventory

| Tool | Who uses it | Data it could touch | Vendor agreement? |
|------|-------------|---------------------|-------------------|
|      |             |                     |                   |
|      |             |                     |                   |
|      |             |                     |                   |
|      |             |                     |                   |

## B. Sensitive-data map

What protected / regulated information exists? (client files, patient records, financials, privileged material, PII, IP)

## C. The 5-component gap check

Rate each pillar: **R** = missing **Y** = partial **G** = solid

| Component          | What it means                                     | R                        | Y                        | G                        |
|--------------------|---------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Data perimeter     | Sensitive data stays inside your control          | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Grounded retrieval | Answers from your real documents, not guesses     | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Audit trail        | Every query, source, and output is logged         | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Human in the loop  | A person reviews consequential output             | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Governance         | Policy, access control, and ownership are defined | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

## D. Your top 3 exposures

1.
- 
2.
- 
3.
- 

## E. Where AI would actually help (2 workflows)

1.
- 
2.
- 

**Now make it a plan.** The AI-Readiness Review turns this into a prioritized roadmap and a scoped build proposal — a 1-2 week engagement, fee credited toward your build. The first step is a free intro call.
